

Presidia Gel™

OC Sprays

CS is used as the primary non-lethal self-defense chemical agent in Europe.

CHEMICAL COMPONENTS

OC, commonly referred to as pepper spray, is derived from the oils of hot chili pepper plants.

CS is the defining component of tear gas and is often used as a riot control agent.

PROVEN USES

Pepper sprays are commonly used as the U.S. in outdoor non-lethal defense sprays and as bear spray.

CS Presidia Gel™ affects only sensitive tissue and mucous membranes (e.g. nose, mouth, and eyes), through direct contact.

EFFECTIVENESS

OC sprays cause burning sensations on skin and in the respiratory system, increasing collateral damage.

CS Presidia Gel™ has a fast dissipation rate (about 15 minutes), making it ideal for indoor and institutional use.

IMPACT ON SURROUNDINGS

OC sprays have a long contamination period and can cross-contaminate people from touching it on clothing or surfaces.

CS Presidia Gel™ is a thickened formula designed to be target specific. It sticks to the skin with little to no side-splatter.

TARGET SPECIFIC

OC will fill a room with fine particulates, causing lasting contamination of furniture, HVAC systems, and other surfaces.
